	1964	Superintendent Engineer's headquarters, where I was responsible for some technical developments and a whole range of programmes using the new communications satellites. This involved visits abroad to liase and

1967 Became Chief Assistant to Head of Television Network.

Network Department has about 110 staff and runs the BBC 1 & 2 Network Control Rooms, The Central Apparatus Room, two Presentation Studios, the International control Room and Standards Converters.

I was responsible for the equipment side of the operation, including developments, as well as continuing with the technical arrangements for complex programmes.

- 1970 Promoted to Head of Television Network. Became the BBC's International Contact Engineer and joined a number of EBU committees and working groups. Continued with overseas programme operations visiting many countries in the process.
- Promoted to General Manager Network and Recording.
 Recording run VTR and Telecine and have about 550 staff so, in all, I had approximately 660 staff the vast majority graduate engineers. At about this time we commenced the changeover from 2 inch to 1 inch format C video tape equipment. I gave up working on international programmes, but remained International Contact Engineer.
- The BBC decided that it needed a senior engineering representative on the international scene, and asked me to become Assistant Controller Engineering Television Operations. Which post I held until my retirement in November 1986. This involved concentrating on international operations and technical policy.

Among the international programmes for which I have been technically responsible for the overseas facilities are:

Four Summer Olympic Games

Two Winter Olympic Games

Four Apollo Space Missions (For the EBU)

Two World Football Cups

European Athletics Championships

World Athletics Championships
